connect  
service seeker  
and provider**

# Introduction

# Problem Statement

Food wastage has been an issue of grave concern for the past years. According to Food and Agriculture Organization data, 1/3rd of food produced for human consumption is wasted globally, accounting for almost 1.3 billion tons per year. On the other hand, as per WHO, 20% of the population faces extreme food shortages. It simply means that we don't lack the food, but we lack the source to bridge the gap between the extra food and that of hungry folk.

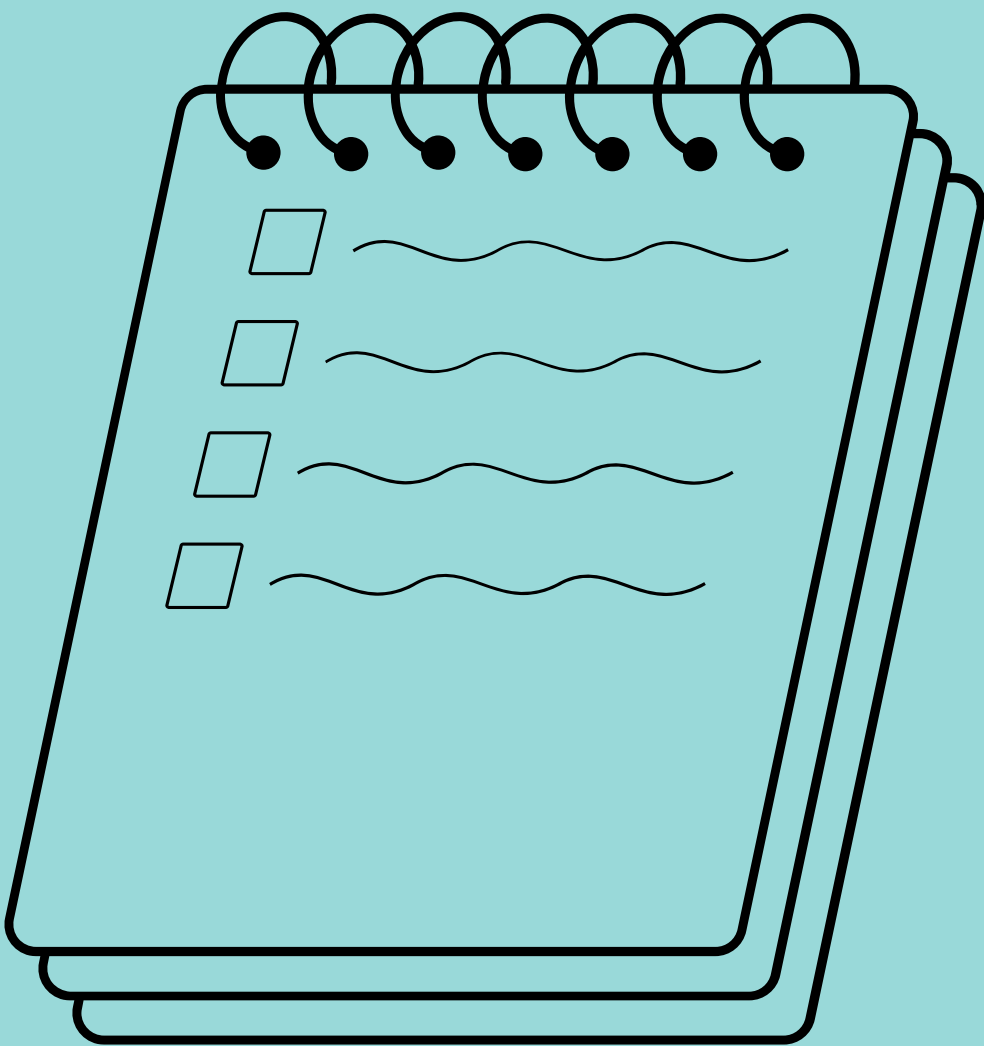

Hence there is a need to come up with a solution that can avoid food wastage & can help feed the needy by building an interface that will help in easy communication between the NGOs (i.e. distributors) and the providers.

# SOLUTION

A proposed solution to this problem is a web app which can assist the NGOs in collecting the leftover food from hotels & restaurants .

So the hotels, restaurants and other donators can contact to the NGOs through the web app.

The NGOs can collect the food from the restaurants for distribution. In this way, this app will help both restaurants to reduce food waste and feed the poor and needy.

# Implementation

# Work Flow

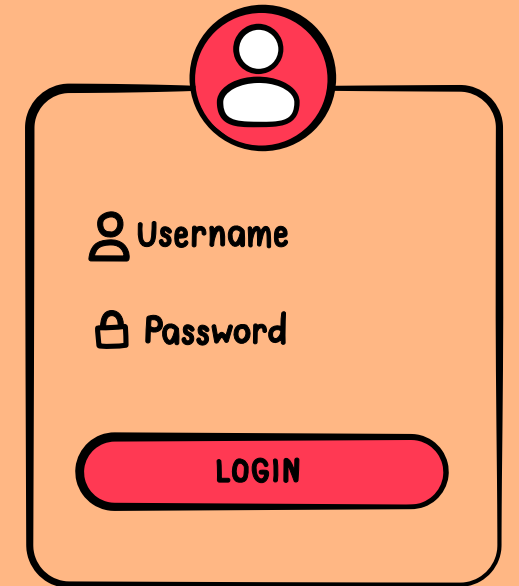

# Frontend

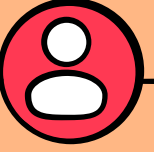

Interactive user friendly interface using HTML, CSS, Javascript and React.

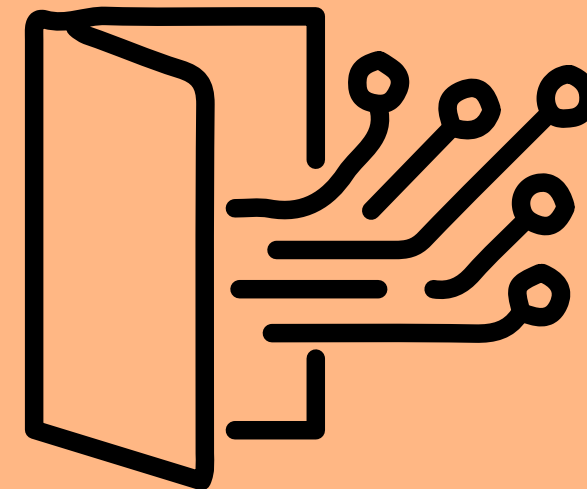

# Backend

Backend in Javascript framework Nodjs, jquery  
database in MySQL (tentative).

mini chat system - for better  
communication between the  
user and ngo

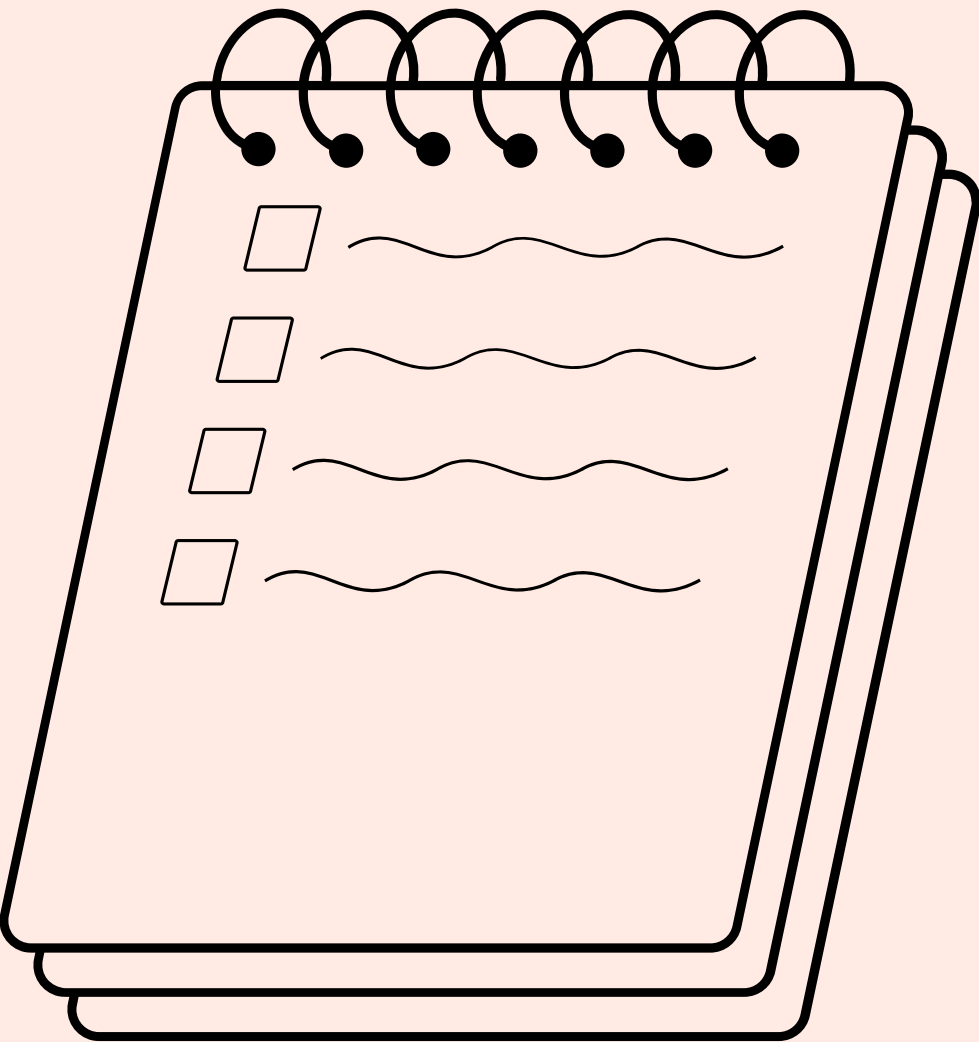

A login form with a red circular profile icon at the top. Below it are two input fields: 'Username' with a person icon and 'Password' with a lock icon. At the bottom is a red 'LOGIN' button.

  
Username  
Password  
LOGIN

# FUTURE SCOPES

1	Other services like donation of clothes, books, recycle items
2	Alerts and periodic notifications via emails and WhatsApp to increase reach to users
3	Track of NGO on the user side while NGO is approaching
